

COMBI GAS DETECTION SYSTEMS

PRODUCT DESCRIPTION:

The Combi range of multi-channel control systems offers an incredibly versatile approach whilst ensuring a reliable safety system across all industries and applications. Having the capacity to monitor up to 64 addressable and 16 direct sensors, 8 of which will accept the CC-1 bridge converter module. Larger system requirements can also be met with over 1000 addressable sensors possible through a networked Combi solution.

Designed to take the user experience to the next level, the Combi can be installed in all customer environments with configurations available as a wall mounted unit, 19" rack system, panel and din rail mount.

Combi features a vast range of optional equipment including Combi software, enabling full data logging facilities with system management, providing real time views showing sensor locations, alarm status and actual gas values.

COMBI OPTIONS

Choosing the gas detection system for your specific requirements

Designed to operate across multiple industries and applications, the unique system architecture offers flexibility with up to six different control panel options. The intuitive user interface sees parameters set via the front panel or alternatively via PC, and detectors supplied pre-calibrated. Combi can be customised to meet your specific requirements, without the need for extensive cabling, providing a comprehensive, highly configurable safety system.
